

## Track Spill Pans

- Durable construction
- Contain spills
- Easily assembled
- Built in drainage
- Anti-Slip surface
- Protects cross ties

Manufactured in a variety of fiberglass materials to handle various products. These come in various widths and lengths to handle overfills that may occur from railcars.

Managers of industrial or railroad facilities handling oil, fuels and chemicals are aware that even the most careful procedures cannot totally eliminate spills in areas where rail cars and locomotives are loaded, unloaded, washed or fueled. It's a serious problem because the spilled substances can damage the environment as well as cross ties and equipment.
